

Government Line Card

Composite Software, Inc. is the only United States-based company 100% focused on data virtualization.

The Composite Data Virtualization Platform integrates data from multiple, disparate sources - anywhere across the extended enterprise - in a unified, logically virtualized manner for on-demand consumption by a wide range of front-end business solutions.

Particularly effective as a SOA data services development and run-time solution, Composite data services are key enablers for the following Federal Enterprise Architecture (FEA) components:

- Service Component Reference Model
- Technical Reference Model
- Data Reference Model

Federal agencies with disparate, complex information environments increase their data agility, cut costs and reduce risk with Composite Software.

Backed by nearly a decade of pioneering R&D, Composite Software is the data virtualization performance leader, scaling from project to enterprise for data federation, SOA data services, data warehouse extension, enterprise data sharing, real-time and cloud computing data integration.

Composite Software's Data Virtualization Platform

PRODUCT CATALOG

The **Composite Data Virtualization Platform** supports a complete data virtualization development lifecycle and high reliability operations.

Composite Discovery helps to discover and model key entities and relationships during the requirements development and high-level design phase.

Composite Information Server provides two, easy-to-use development environments (Studio and Designer) with automated code generators help developers create high-quality, semantically meaningful, standards-compliant views and data services at build time. Rich tools enable complex federation and transformation functions. Standard adapters simplify access and publication development activities. And the Manager controls security, metadata, source code and more. At run time, the Composite Information Server's query engine – the data virtualization performance leader – securely queries, accesses, federates, abstracts and delivers data to consuming business solutions on demand. Multiple caching options provide additional speed and flexibility.

Composite Applications Data Services, with pre-built objects for leading ERP suites and SQL to MDX translators, further automate and accelerate critical view and data service development activities. These include:

- Composite Application Data Services for Oracle E-Business Suite
- Composite Application Data Services for Oracle Essbase
- Composite Application Data Services for Salesforce.com
- Composite Application Data Services for SAP
- Composite Application Data Services for SAP Business Warehouse
- Composite Application Data Services for Siebel

Composite Monitor and **Composite Active Cluster** provide the monitoring, load balancing, high availability and failover required for reliable, 24x7 enterprise-level operations.

SERVICES CATALOG

Product Support and Maintenance

Composite Standard Technical Support provides Monday to Friday, 9:00 to 20:00 PST telephone and web-based support for developers and administrators. Standard Technical Support includes access to all bug fixes, product enhancements, and new versions of licensed products as they become available. We offer Premium Support (i.e. 24x7 support), for an additional fee.

Education Services

Classes for Composite developers and administrators are conducted at a location of customer's choosing, and can be tailored to customer requirements for an additional fee.

- Composite Information Server Primer
- Composite Information Server Basic
- Composite Information Server Advanced
- Composite Information Server Administration

Consulting Services

Composite Consulting Services mission is to facilitate and encourage successful client and partner adoption of Composite data virtualization. Deep Composite subject matter experts, Composite consultants have wide and deep technology, architecture, and development domain knowledge and skills. Composite's senior architects and software engineers provide assistance at every step in your software development lifecycle, complementing existing staff and system integrators, either on-premise or remotely. And they provide a critical link to additional Composite resources in Product Development, Support and Education.
