

Composite Customer Comments

"Composite's data virtualization capabilities are driving big value in our core wireless business."

GARY GRANT
 DIRECTOR, INTEGRATION SERVICES

"We are very pleased with our new reporting solution, which provides our securities lending clients with an increased level of transparency and information. In light of the new market environment, clients are interested in easily accessible information on their securities lending programs and collateral reinvestment options. So we strive to provide this information in the most technologically advanced way possible. The Composite Information Server delivers all the data for this key component of our business."

LEN HARDY
 SENIOR VICE PRESIDENT

"New reports and projects that used to require a standard 5-day turnaround now can be accomplished in a self-service manner by the end user who is empowered to use the Composite Information Server layer and build his own solution on-demand often in less than an hour."

SION KING
 PROJECT MANAGER

Deutsche Bank

"Typically, data integration is 50% of the elapsed time of each of our large portal and applications projects. We are able to cut the data integration development time by 50-60% using the Composite Information Server."

KOWSALYA VAITHIKANNAPPAN
 VICE PRESIDENT

"In our Integration Competency Center, we have all the DI tools you can find out there on the market. But when senior execs come to me daily with key project/resource questions whose answers will determine the courses of action we'll take in running our business, my team uses the rapid deployment methods that are built into Composite. This reduces each project from 4-6 weeks to 2-3 days."

MIKE LINHARES
 PROJECT LEADER, BUSINESS INFORMATION SYSTEMS

"Because of the Composite Information Server, we now have a faster time to market for new programs and initiatives, improving the experience between sponsor and child. This extends the lifetime value of the sponsor to the child. A real win-win for everyone!"

KENNY SARGENT
TECHNICAL LEAD, ENTERPRISE DATA PROJECTS

"The Composite Information Server is our single connection point for all Customer Care data. Comprehensive business intelligence requires federation of data services from packaged applications, master data, and high-volume operational data. Before Composite Information Server, the process involved many costly manual steps. Now the process is automated, which has improved the effectiveness of our CARE business"

DIANE MCELHINEY
BI DATA ARCHITECT

"Data virtualization is not only gaining traction in terms of mind share as more people connect with the fundamental ideas and advantages, but it continues to be a tool of operational excellence that meets or exceeds the demands we put on it. It is our goal to see that data virtualization continue to play a foundational role in how we think about data architecture at Qualcomm."

MARK MORGAN
SENIOR IT MANAGER, IT ENTERPRISE ARCHITECTURE

"Today, we are providing ALL supply and demand information into our new planning and forecasting functions. This is a critical area of the business, as you can imagine, and Composite Information Server is the platform for all this data."

TOM PRUETT
ENTERPRISE ARCHITECTURE

"Our customers are very demanding and in their world, things can change very quickly. We must provide them with trending business and market intelligence even before they ask for it! The Composite Information Server provides a way for us to deliver that better information, faster, and with least possible cost."

JOHN BOYER
BUSINESS INTELLIGENCE PROJECT MANAGER
